

MEDICAL CONSULTANCY DATABASE USER'S MANUAL

Initial manipulation of the database, for both doctors' and patients' use

The database that we have created will provide a service for both patients and doctors registered. The first thing that will appear once we access the database will be for us to register or login in the case that we are already part of the database. Following this initial step, the database will demand if we are a doctor or a patient if we are being introduced for the first time into the database, otherwise your email and password will be required. Depending on if you are a doctor or a patient, a menu with the corresponding options will be displayed.

Turn a videoconsultation into an XML file	Turn a prescription into an XML file
Turn an XML file into a videoconsultation	Turn an XML file into a prescription
Turn a videoconsultation into an html	Turn a prescription into an html

Options related to a patient

When a patient has been either registered or logged in, we have the options displayed in the patients' menu above. What will appear within each of the options will be shown below.

PATIENT

Show my profile	Will display →	Id, name, gender, birthdate, phone number, postcode
Make appointment	Will display →	The information on all the doctors in the database
